

Quick Start Mac

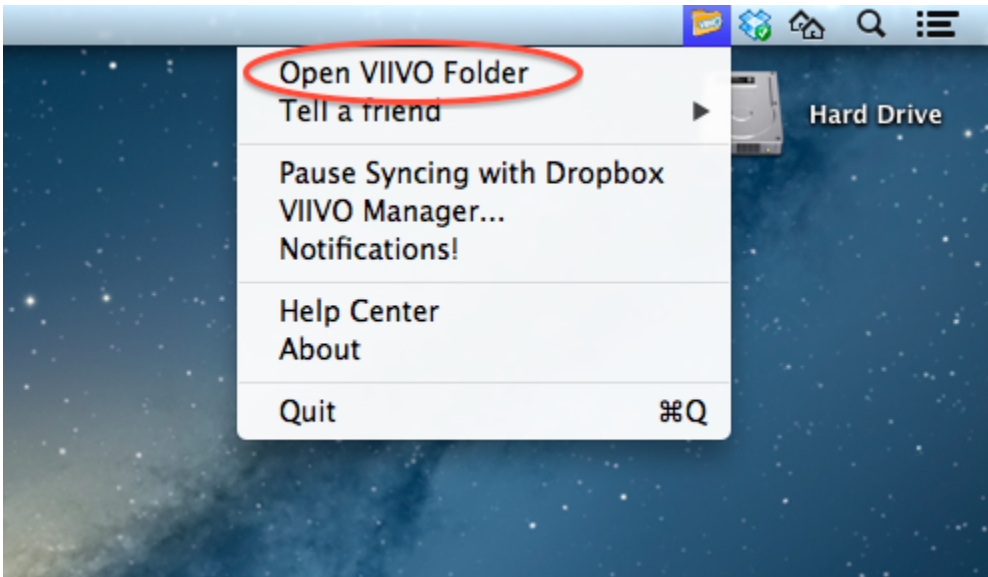

This guide describes functionality of Viivo 1.0 and 2.0. To checkout how encryption works in 3.0 please checkout the [Lockers Page](#)

Viivo 1.0/2.0 Quick Start Guide:

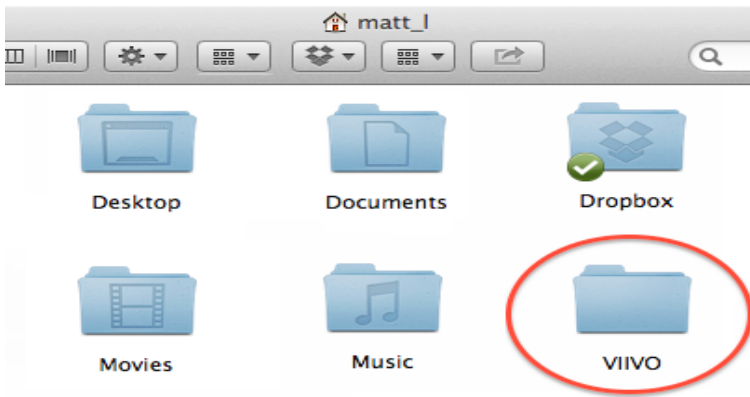

There are two folders you need to work with. 1. *The "Viivo" Folder - which has been placed in your home folder* This folder is where you will place files you want to secure. Anything Copied to or Saved in this folder will cause Viivo to generate an encrypted copy of the same file in the Viivo-Encrypted folder we've created in your Dropbox. Dropbox then syncs the secured files to all of your computers running Dropbox.

After the secured files have been synchronized, Viivo will automatically decrypt them for use by your productivity applications. To access your Viivo folder you can: - Open it from the Viivo icon in your menu bar

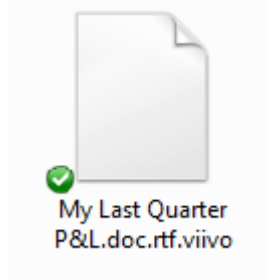

- Open it from your Favorites menu in Finder

It's that simple! This brings us to our next folder...

2. The "Viivo-Encrypted" Folder inside of Dropbox - where the encrypted copies of your protected files are stored

Viivo-Encrypted contains secure copies of everything in your Viivo folder. These copies can remain secured for yourself or they can be shared (via

Dropbox shared folders) with other Dropbox users. All of the secured files end in .viivo.
